

Personal Consultancy Website Blueprint: Radiation Equipment Installation, Commissioning & Training

This document provides a precise, actionable blueprint for launching your personal consultancy website. It is built around your core services—installation, commissioning, and staff training for radiotherapy, diagnostic radiology, and nuclear medicine equipment—and expands into complementary service areas that strengthen your value proposition and attract a wider client base.

1. Executive Summary

Your website will serve as your primary digital storefront, positioning you as a trusted technical partner for hospitals, cancer centres, and diagnostic imaging facilities worldwide. The platform must communicate technical authority, regulatory expertise, and a commitment to safety—while making it easy for busy healthcare professionals to understand your services and engage your consultancy.

Core Value Proposition:

Specialised consultancy for radiotherapy, diagnostic radiology, and nuclear medicine equipment—ensuring safe, compliant, and efficient installation, commissioning, and staff training.

2. Core Service Offerings

2.1 Installation Services

What I Deliver:

- Pre-installation site surveys and utility verification
- Radiation protection and shielding assessment
- Equipment assembly, hardware integration, and software setup
- Manufacturer-grade installation drawings and documentation
- Full system integration with existing hospital infrastructure

Client Pain Points Addressed:

- Minimising equipment downtime during transition
- Ensuring site readiness before equipment arrival
- Managing complex logistics and timelines

2.2 Commissioning & Acceptance Testing

What I Deliver:

- Acceptance testing and performance verification

- Full system calibration to manufacturer and regulatory specifications
- Quality assurance protocol development
- Comprehensive commissioning reports for regulatory audits

Client Pain Points Addressed:

- Regulatory compliance risk and audit preparedness
- Uncertainty about equipment performance and safety
- Delays in bringing new equipment into clinical service

2.3 Staff Training

What I Deliver:

- Clinical applications training for radiation oncologists, radiographers, and technicians
- Technical training for medical physics and biomedical engineering teams
- On-site, remote, or hybrid delivery formats
- Basic and advanced instruction tailored to each centre's unique needs

Client Pain Points Addressed:

- Inadequate staff competency leading to operational inefficiencies
- High reliance on OEM support for routine issues
- Staff turnover creating knowledge gaps

3. Expanded Service Offerings

To differentiate your consultancy and capture more client engagements, add these complementary services to your website. Each can be positioned as a standalone offering or as an add-on to your core services.

3.1 Pre-Purchase Consultation & Equipment Selection

Service Description:

Guide clients through the technology selection process before they commit to a purchase. This service focuses on the technical and scientific aspects to ensure they select the best possible technology for their needs.

Deliverables:

- Technology needs assessment
- Vendor comparison and equipment configuration recommendations
- Budget and ROI analysis
- Site readiness assessment

.

3.2 Project Management for Equipment Projects

Service Description:

Provide end-to-end project management for new equipment acquisitions, expansions, or facility upgrades—from planning through to handover.

Deliverables:

- Project timeline and milestone management
- Coordination with architects, contractors, and vendors
- Budget tracking and risk management
- Stakeholder communication and reporting

Why Add This:

Hospitals and cancer centres often lack internal project management capacity for complex equipment installations. This service solves a critical pain point.

3.3 Radiation Safety & Regulatory Compliance

Service Description:

Provide expert guidance on radiation protection, regulatory licensing, and ongoing compliance.

Deliverables:

- Radiation Protection Advisor services
- Radiation safety testing of equipment
- Radiation protection requirements for buildings
- Professional documentation to facilitate regulatory licensing
- Support for regulatory audits and inspections

Why Add This:

Regulatory compliance is a top concern for any facility using radiation equipment. This service addresses a non-negotiable client need.

3.4 Quality Assurance & Dosimetry Services

Service Description:

Support clients in establishing and maintaining robust quality assurance programs for their radiation equipment.

Deliverables:

- Distributed dosimetry model commissioning
- Ongoing quality assurance program development
- Independent dosimetry audits
- QA protocol review and optimisation

Why Add This:

Quality assurance is an ongoing requirement, creating potential for repeat engagements and long-term client relationships.

3.5 Equipment Relocation & Decommissioning

Service Description:

Manage the safe relocation of existing radiation equipment to new facilities or the decommissioning of outdated systems.

Deliverables:

- Relocation planning and risk assessment
- Safe disassembly, transport, and reinstallation
- Decommissioning and disposal in compliance with regulations
- Minimisation of downtime during transitions

Why Add This:

Facilities undergoing renovation or expansion need specialised expertise to move sensitive radiation equipment safely.

3.6 Preventive Maintenance & Technical Support

Service Description:

Provide preventive maintenance planning and technical support to complement OEM services.

Deliverables:

- Preventive maintenance schedule development
- Remote technical support and diagnostics
- On-site technical intervention
- Spare parts procurement support

Why Add This:

Creates recurring revenue opportunities and positions you as a long-term partner rather than a one-off service provider.

3.7 Regulatory Documentation & Licensing Support

Service Description:

Assist clients in preparing and submitting the documentation required for equipment registration and regulatory approval.

Deliverables:

- Equipment registration documentation preparation
- Licensing application support

- Technical file and dossier development
- Liaison with regulatory authorities

Why Add This:

Many facilities struggle with the administrative burden of regulatory compliance. This service removes that burden.

3.8 Clinical Program Review & Optimisation

Service Description:

Review and optimize existing clinical programs to improve patient outcomes, operational efficiency, and revenue generation.

Deliverables:

- Clinical workflow analysis
- Equipment utilisation review
- Patient engagement improvement strategies
- Clinical research support

Why Add This:

Positions you as a strategic partner rather than just a technical contractor, opening doors to higher-value engagements.

4. Website Structure & Sitemap

4.1 Proposed Sitemap

...

Home

4.2 Page-Level Content Requirements

Page	Key Elements	Purpose
Home	Hero section with value proposition, problem/solution summary, service preview icons, prominent CTA	Immediate engagement and clear positioning
About	Professional biography, qualifications list, certifications, safety philosophy, professional headshot	Trust and credibility building
Services (Main)	Overview of all service categories with links to detail pages	Navigation and high-level understanding
Service Detail Pages	Problem statement, your process (step-by-step), deliverables, client benefits, CTA	Deep expertise demonstration and lead conversion
Equipment Expertise	List of equipment types you work with, technical capabilities	Technical credibility and SEO
Case Studies	Client success stories with measurable outcomes	Social proof
Resources/Blog	Educational articles, industry insights, technical guides	SEO, thought leadership, ongoing engagement
Contact	Contact form, phone, email, response time commitment	Lead capture

5. Content Strategy & Messaging

5.1 Core Messages to Communicate

1. Safety First: Every service is anchored in radiation safety and patient protection
2. Regulatory Expertise: Deep knowledge of local and international regulatory frameworks
3. Technical Authority: Decades of hands-on experience with complex radiation equipment
4. Client Partnership: You don't just deliver services—you become a trusted advisor
5. Global Reach: Ability to serve clients worldwide

5.2 Sample Service Page Structure (Commissioning)

Page Title: Commissioning & Acceptance Testing for Radiation Equipment

Intro Paragraph:

> I provide comprehensive commissioning and acceptance testing services for radiotherapy, diagnostic radiology, and nuclear medicine equipment—ensuring optimal performance, regulatory compliance, and patient safety from day one.

The Challenge:

> Improper commissioning can lead to equipment malfunction, regulatory non-compliance, and patient safety risks. Facilities face pressure to bring new equipment into service quickly while meeting stringent quality standards.

My Approach:

- > 1. Pre-Commissioning Review: Documentation review and site preparation verification
- > 2. Acceptance Testing: Systematic testing against manufacturer and regulatory specifications
- > 3. Performance Verification: Full calibration and quality assurance testing
- > 4. **Documentation:** Comprehensive commissioning reports for regulatory audits and future reference

Deliverables:

- Commissioning report with all test results
- Calibration certificates
- Quality assurance protocols
- Regulatory compliance documentation

CTA: Request a Commissioning Quote

6. Technical & SEO Considerations

6.1 Platform Recommendations

- CMS: WordPress (scalable, SEO-friendly, extensive plugin ecosystem)
- Hosting: Managed WordPress hosting with SSL certificate
- Security: SSL encryption, secure contact forms, regular backups

6.2 SEO Keyword Strategy

| Category | Keywords |

|-----|-----|

| Primary | Radiation equipment installation, Medical equipment commissioning, Radiotherapy consultancy |

| Secondary | Linac commissioning, CT scanner installation, Nuclear medicine equipment services, Radiation safety consulting |

| Long-tail | Pre-purchase consultation for radiotherapy equipment, Radiation equipment regulatory compliance, Medical physics training services |

6.3 Lead Generation Features

- Contact Form: Simple form with name, email, phone, and message fields
- CTA Buttons: "Request a Consultation" on every service page
- Scheduling Link: Calendar integration for booking initial calls
- Response Commitment: "I respond to all inquiries within 24 hours"

7. Launch Checklist

Phase 1: Foundation

- Register domain name (e.g., yournameconsulting.com)
- Set up hosting and install WordPress
- Choose a professional, healthcare-focused theme
- Install essential plugins (SEO, security, analytics, forms)

Phase 2: Content Creation

- Write Home page content (hero, problem/solution, services preview)
- Write About page (biography, qualifications, certifications)
- Write all service detail pages (10+ pages)
- Write Equipment Expertise page
- Prepare 2-3 case studies or testimonials
- Write 3-5 blog posts for initial content

Phase 3: Technical Setup

- Implement on-page SEO (meta titles, descriptions, heading structure)
- Set up Google Analytics and Google Search Console
- Configure contact forms and lead capture
- Test website on desktop, tablet, and mobile
- Test page load speed and optimise images

Phase 4: Launch

- Final content review and proofreading
- Submit sitemap to Google Search Console
- Announce launch on LinkedIn and professional networks
- Share with existing contacts and clients

Phase 5: Ongoing Maintenance

- Publish 1-2 blog posts per month
- Monitor analytics and adjust strategy
- Update case studies and testimonials
- Review and refresh content quarterly

8. Sample Blog Post Ideas

Topic	Purpose
"Top 5 Considerations for Linac Installation"	Demonstrate expertise in radiotherapy equipment
"What to Expect During Commissioning: A Step-by-Step Guide"	Educate clients and build trust
"Common Regulatory Pitfalls in Radiation Equipment Projects"	Address client pain points
"Choosing the Right Radiation Equipment: A Buyer's Guide"	Support pre-purchase consultation services
"Staff Training Best Practices for New Radiation Equipment"	Promote training services
